

Pedestal – 2 Player

1. First, put the right side of artwork down on a blanket, anything so graphics do not get scratched. Then put provided 9 cam screws in predrilled holes.

2. Next, you will put down your large front piece and middle piece with the provided cam locks facing inside. Lock in the cam locks by twisting with a screwdriver.

3. The next pieces to be installed is the bottom back panel and the top panel that holds your control panel. The bottom panel will be facing the back so make sure the cam locks are facing towards the inside. The top panel has predrilled holes for a back door clip. That clip should be facing towards the back of the unit. Lock into place as you go.

4. The next piece is the back door. This panel will be secured with only one cam screw and the back door clip. **This makes it tricky because it can hang, and it will break off.** Make sure you are supporting this piece.

5. Double check that all your screws are tightened, and you are ready to start aligning your left side panel. Start at the top of the unit and work your way aligning every screw. Once the left side is flat to the rest of the unit, lock everything into place.

6. Finally, you will lock in your bottom piece and you will be finished with your pedestal
